#### **INDICATIONS:**

Betaseron (interferon beta-1b) is a prescription medicine used to treat relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults.

#### IMPORTANT SAFETY INFORMATION

Do not take BETASERON (interferon beta-1b) if you are allergic to interferon beta-1b, to another interferon beta, to human albumin, or mannitol.

#### **BETASERON** can cause serious side effects, including:

Liver Problems Including Liver Failure. Symptoms of liver problems may include yellowing of your eyes, itchy skin, feeling very tired, flu-like symptoms, nausea or vomiting, bruising easily or bleeding problems. Your healthcare provider will do blood tests to check for these problems while you take BETASERON.

Serious Allergic Reactions. Serious allergic reactions can happen quickly and may happen after your first dose of BETASERON or after you have taken BETASERON many times. Symptoms may include difficulty breathing or swallowing, swelling of the mouth or tongue, rash, itching, or skin bumps.

**Depression or Suicidal Thoughts.** Call your healthcare provider right away if you have any of the following symptoms, especially if they are new, worse or worry you: thoughts about suicide or dying, new or worse depression (sinking feeling or sadness), new or worse anxiety (feeling uneasy, nervous or fearful for no reason), trouble sleeping (insomnia), acting aggressive, being angry, or violent, acting on dangerous impulses, hallucinations, other unusual changes in behavior or mood.

#### Other possible serious side effects with BETASERON include:

**Heart Problems.** BETASERON may worsen heart problems including congestive heart failure. Symptoms of heart problems may include swollen ankles, shortness of breath, decreased ability to exercise, fast heartbeat, tightness in chest, increased need to urinate at night, not being able to lay flat in bed.

#### **IMPORTANT SAFETY INFORMATION (continued)**

**Injection Site Problems.** Serious skin reactions can happen in some people including areas of severe damage to skin and the tissue below the skin (necrosis). These reactions can happen anywhere you inject BETASERON. Symptoms of injection site problems may include swelling, redness, or pain at the injection site, fluid drainage from the injection site, and breaks in your skin or blue-black skin discoloration. Call your healthcare provider right away if an injection site becomes swollen and painful or the area looks infected. You may have a skin infection or an area of severe skin damage (necrosis) requiring treatment by a healthcare provider.

**Flu-like Symptoms.** BETASERON can cause flu-like symptoms including fever, chills, tiredness, sweating, muscle aches when you first start to use it. These symptoms may decrease over time. Taking medicines for fever and pain relief on the days you are using BETASERON may help decrease these symptoms.

**Seizures.** Some people have had seizures while taking BETASERON, including people who have never had seizures before. It is not known if the seizures were related to MS, to BETASERON, or to a combination of both. If you have a seizure after taking BETASERON call your healthcare provider right away.

**Blood Problems.** You may have a drop in the levels of infection-fighting white blood cells, red blood cells, or cells that help you form blood clots. If drops in levels are severe, they can lessen your ability to fight infections, make you feel tired or sluggish or cause you to bruise or bleed easily.

#### **Pregnancy:**

Tell your doctor if you are pregnant or plan to become pregnant.

#### **Most Common Side Effects:**

The most common side effects of BETASERON include low white blood cell count, increases in your liver enzymes, headache, increase in your muscle tension, pain, rash, problems sleeping, stomach pain, weakness. These are not all the possible side effects of BETASERON.

Tell your healthcare provider if you have any side effect that bothers you or that does not go away. Tell your healthcare provider about all the medicines you take and your medical conditions.

Please see the full Prescribing Information and Medication Guide for additional information and talk to your healthcare provider.

You are encouraged to report side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088.

It's all about tracking your progress.

#### **USE THIS JOURNAL TO TRACK YOUR THERAPY.**

#### THIS JOURNAL CAN HELP YOU:

- Stay organized and keep contact information in one place
- Keep track of your injections and rotate them properly
- Remember important appointments and tests
- Keep medical and insurance information handy
- Remember when to reorder your BETASERON® (interferon beta-1b) refills

#### **TOOLS TO HELP YOU TRACK YOUR TREATMENT:**

- A Rotating Injection Sites diagram showing 24 recommended injection sites
- 9 monthly calendars for tracking your injection sites
- A Treatment Tracker you can fill out every 3 months and discuss with your healthcare team

#### MY MEDICATIONS

Use the chart below to fill in details about all your medications. Make sure your doctors know about ALL the medications you're taking, including supplements.

DRUG NAME/ PRESCRIPTION NO.	STRENGTH	HOW OFTEN	USED FOR	PRESCRIBED BY
BETASERON®	1.0 mL	Every other day	RRMS	Dr Cunningham

#### FAQs ABOUT BETASERON® (interferon beta-1b)

- How do I get personal injection training?
- A Every person taking BETASERON can get personal injection training from their BETA Nurse or healthcare provider. Your BETA Nurse can help make sure you are confident using BETASERON. To schedule a time for a BETA Nurse to come to your home\* or doctor's office, just call **1-844-788-1470**.

\*Where state laws and your insurance allow.

#### • Are there tips to help reduce injection site reactions?

A Serious skin reactions can happen to some people, including areas of severe damage to skin and the tissue below the skin (necrosis). One thing you can do to help reduce injection-site reactions is to rotate your injection sites. Never use the same injection site twice in a row. If an area is sore, red, infected, or swollen, use another area and call your healthcare provider.

Use BETA track™ or this journal to mark your injection site. It can help you keep track of when and where to inject. Talk with your BETA Nurse or healthcare provider about more things you can do to help make your injection experience go more smoothly.

#### **Q** How do I store BETASERON® (interferon beta-1b)?

A BETASERON does not need to be stored in the refrigerator. It can be stored at room temperature up to its expiration date. That's a big plus when you're traveling! If you don't use BETASERON immediately after reconstitution, you can refrigerate it and use within 3 hours. Do not freeze BETASERON.

#### • How do I dispose of used BETASERON syringes?

A Put the used syringe and needle in a proper sharps container for safe disposal. To avoid injury, do not attempt to recap a used needle. DO NOT throw the needle or syringe in the household trash or recycle bin. Always keep the sharps container out of the reach of children. When the container is full, ask your pharmacist or BETA Nurse where you can drop it off. The laws for getting rid of sharps containers differ from state to state.

#### Where can I get a sharps container?

A You can get one from a local pharmacy, or call BETAPLUS® at 1-844-788-1470 and they will ship you one for free.

#### • What if I have to travel with BETASERON?

A If you're flying, always keep your medication in your carry-on luggage because checked bags can get lost. Your healthcare provider can give you a note for airport security to explain why you need to take an injectable treatment on board with you. And don't worry about the X-ray scanners; they won't affect BETASERON in your carry-on bags. You also don't have to worry about refrigerating BETASERON.

Still have questions? Talk with your healthcare team. Remember, your BETA Nurse is available anytime, day or night, including weekends and holidays. Just call **1-844-788-1470**.

#### TRACKING TIPS

- Write in the month and dates on each new calendar, starting on page 13
- Circle your first injection day each month
  - If the day is **light blue**, you will inject on every **light blue** day for the rest of the month
  - If the day is **light green**, you will inject only on **light green** days
- You can also note whether your first injection day is an ODD or an FVFN number
- In our sample calendar below, if you started your injection on the second day of the month, you would inject on every EVEN-numbered day for the rest of that month
- Keep track of each injection area and section, as well as your dose
- Your doctor may suggest starting your BETASERON® (interferon beta-1b) at a lower dose and increasing it over time. This process is called titration
- Titration gives your body time to adjust. Following your doctor's instructions, your BETA Nurse will help you mark your journal calendar to remind you when to increase to a higher dosage

**To learn more** about titration, talk with your healthcare team, refer to the Injection Training Guide that came in your Training Kit, or call your BETA Nurse at 1-844-788-1470.

#### A BETA NURSE IS ALWAYS AVAILABLE

With the BETAPLUS® Support Program, support is always just a phone call away. To speak with an MS-trained BETA Nurse anytime, day or night, even holidays and weekends, call **1-844-788-1470**.

#### REMEMBER TO REFILL AND REORDER

Call your pharmacy for a refill a week before you run out of BETASERON. And be sure to reorder your new Treatment Journal with your BETA Nurse at **1-844-788-1470**. Please allow up to 4 weeks for delivery.

Models used for illustrative purposes only.

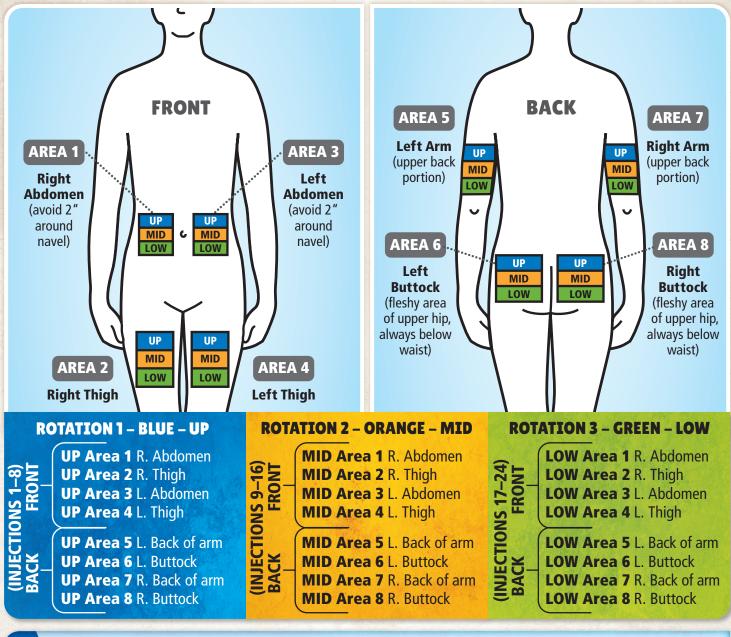

A	<b>Call a BETAPLUS® Coverage Specialist</b>	at
L.	<b>1-844-788-1470</b> <i>if experiencing coverage</i>	issues

NOTES:	

Using this rotation schedule, you'll come back to your first injection site after 24 injections (48 days). Remember, if an area is sore, red, infected, or swollen, choose another area. If you notice any unusual skin conditions, immediately call your healthcare provider or your BETA Nurse at **1-844-788-1470**.

Please see Indications and Important Safety Information on pages 4 and 5, and <u>full Prescribing Information</u>. For BETACONNECT™ Instructions for Use, please visit www.betaconnectifu.com.

#### **INJECTION SITES**

The best areas for injection are where the skin is loose and soft and away from the joints, nerves, and bones. DO NOT use the area near your navel or waistline. If you are very thin, use only the thigh or outer surface of the arm for the injection.

#### **ALWAYS ROTATE YOUR INJECTION SITES.**

# TO HELP REDUCE INJECTION SITE REACTIONS, ROTATE YOUR INJECTION SITES PROPERLY.

Use the rotation chart on the previous page, and follow the recommended area as you go along.

- If an area is sore, red, infected, or swollen, use another area.
   Never use the same injection site twice in a row
- Always keep track of where you last injected with your Treatment Journal or BETA track™

#### Questions?

Talk with your healthcare team or your BETA Nurse. You can also review the Injection Training Guide that came in your Training Kit or watch the injection training video on **BETASERON.com/resources/videos-resources**.

Please see Indications and Important Safety Information on pages 4 and 5, and <u>full Prescribing Information</u>. For BETACONNECT™ Instructions for Use, please visit www.betaconnectifu.com.
